

Triple glazing bead

for optimum energy efficiency

Triple glazed windows offer optimum energy efficiency and value for money, making your customers' homes warm and their energy bills low, and with an extra pane of glass and an extra 14mm cavity it's quieter too.

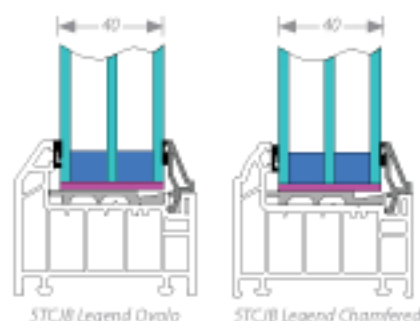

As the window has a third pane of glass, the unit is much harder to break than the double glazed unit, especially when the middle pane is made of toughened glass. Synseal's triple glazing bead option can accommodate a 40mm unit in Legend.

- Capable of achieving a U-value of 0.8* or less
- Improved acoustic performance
- Available in White, 3 Woodgrains and 13 Artisan colours

*Thermal glazing bridge packer required.
